Shell Shock Technologies Welcomes Chase Rains as its Newest Sponsored Shooter

Shell Shock Technologies will supply Rains with its NAS³ cases for his competitions during 2020.

Westport, Conn. (May 2020) – Shell Shock Technologies, LLC., an early-stage technology, and manufacturing company focused on developing innovative case technologies for the ammunition industry, is pleased to announce it has signed Chase Rains as its newest sponsored shooter. Shell Shock Technologies will be supplying Rains with its NAS³ cases for his competitions in 2020.

"I've seen this product in action and I believe it is driving the industry in the right direction. I'm looking forward to representing Shell Shock Technologies at my upcoming matches and helping to educate other shooters as to why their NAS³ cases are a step above the rest," commented Rains.

A lifelong shooter, hunting and target shooting have always been Rains' favorite pastimes. As he grew up, he began to work on firearms and became a Certified Gunsmith, as well as an instructor teaching new shooters. In 2018, Rains was invited to a 3 Gun match and fell in love immediately. He began competing shortly after, then transitioned to USPSA matches as his main focus. In 2019 he competed in nine majors and over 40 Level 1 matches.

He can be seen competing next at the $\underline{2020 \text{ Oklahoma Section Championship}}$, to be held at the Oklahoma City Gun Club, in Arcadia, Oklahoma, from June 19 - 20, 2020.

About Shell Shock Technologies NAS³ Cases:

NAS³ 9mm cases are 50 percent lighter than brass cases, offer greater lubricity, and will not abrade, clog, foul, wear-out or damage breach and ejector mechanisms. The cases offer greater corrosion resistance, tensile strength (2x stronger), and elasticity than brass. NAS³ cases will not split, chip, crack or grow (stretch) and are fully reloadable (using S3 Reload dies) and can be reloaded many more times than brass cases. NAS³ cases have been tested successfully by customers to pressures over 70k psi. NAS³ cases can be picked up with a magnet. The head can be colored for branding purposes and easy load identification.

NAS³ is "Best in Class" for maintaining consistent velocity between rounds. In an independent test performed by H.P. White Laboratory (a major munitions testing facility), rounds fired using NAS³ cases achieved a velocity standard deviation of 0.093 FPS (124-grain FMJ bullet, 4.2 grains Titegroup powder, 10 rounds, extreme variation 3fps).
